

Statement of contribution

Suhasini Aswath

My roles have been Solution Architect, Developer, Requirements Engineer and Quality Assurance Engineer. I contributed to the project by setting the requirements, working on the back-end service, and testing the model. Most of our group's work was done individually, with team meetings at suitable intervals to problem-solve and divide tasks for the next upcoming weeks. I engaged with the group through our collective team meetings and on an individual basis when there was something concerning only one other student and me.

Ziaul Chowdhury

My roles have been Solution Architect, Data Scientist, and Developer. I contributed to the project by designing and developing the Machine Learning model and handling deployment and scaling of the model. I collaborated with the other team members via our scheduled team meetings and when one of the other students and I discussed specific matters.

Christina Larsson

My roles have been Requirements Engineer, Data Scientist, Developer and Subject Matter Expert. I contributed to the project by proposing a field of study, finding data sets, providing subject matter expertise, and coding the frontend app. I interacted with the group through our team meetings and one-to-one work sessions, when we had tasks to solve one-to-one.
